

(April 2018 – March 2019)

## PRESENTED IN ANNUAL WORKSHOP Of KVKs of Zone II

HELD AT

OUAT

Bhubaneswar

(26<sup>TH</sup>- 27<sup>TH</sup> May 2018)

KRISHI VIGYAN KENDRA, SCADA, ARA, SONE COMMAND AREA DEVELOPMENT AGENCY, SONE BHAWAN, DAROGA PRASAD RAI PATH,

PATNA - 800001

## **BHOJPUR AT A GLANCE**

### 1. ESTABLISHMENT: 18.12.1972

(Partition of old Shahabad District and formation of Bhojpur and Rohtas)

#### 2.GEOGRAPHICAL LOCATION:

Latitude:  $25^{0}15$ 'N to  $25^{0}46$ 'N

Longitude:  $84^{0}45$ 'E to  $85^{0}15$ 'E

Altitude: 195.98 M above MSL

#### **3.GEOGRAPHICAL BOUNDRY:**

- North: River Ganga, Saran & Baliyan district
- South: Rohtas and Gaya district
- East: River Sone and Patna district
- West: District Buxar

### 4.GEOGRAPHICAL AREA:2337.37 (sq km.) or 233729.15 (ha)

**5.AGRO-CLIMATIC REGION &ZONE:** The district comes under South Bihar Old Alluvial Plains, which has been categorized as Grade III (Sub-humid). The Soil type is heavy to sandy clay.

### Rainfall data (m.m.)

Normal	: <b>959.9 mm</b>
Actual	: <b>817.92 mm</b>
II. Temperature : Min	n. 6 <sup>0</sup> C; Max.40 <sup>0</sup> C

III. Relative Humidity: 35 to 95%

#### 6. NO. OF BLOCKS/VILLAGE

(a) No. of Blocks
(b) No. of Village Panchayat
(c) No. of Village-Inhibited
(d) No. of Village-Non-Inhibited
(e) No. of Village Electrified
426

### 7. (a). <u>POPULATION (AS PER CENSUS):</u>

Sl.No.		Males	Female	Total
1.	Urban	169,535	142,879	312,414
2.	Rural	1,010,076	920,654	1,930,730
	Total	1,179,611	1,063,533	2,243,144

(b) Population density/sq km. : 903

(c) Population below poverty line  $:42.5^{0}/_{0}$ 

### (d) PERCENTAGE OF POPULATION W.R.T. VARIOUS PARAMETERS:

Sl. No.	Parameter	Total	Rural	Urban
1.	Literacy rate: Persons	58.96	56.84	71.55
	Male	74.29	73.43	79.55
	Female	41.80	38.50	62.36
2.	Main workers: Persons	21.93	22.07	21.07
	Male	36.78	36.85	36.41
	Female	5.45	5.85	2.87
3.	Marginal workers: Persons	7.22	7.97	2.57
	Male	7.31	7.96	3.43
	Female	7.12	7.98	1.55
4.	Non- workers: Persons	70.85	69.96	76.36
	Male	55.91	55.19	60.16
	Female	87.43	86.16	95.58
5.	SC Population: Persons	15.32	16.22	9.76
	Male	15.38	16.33	9.71
	Female	15.25	16.10	9.81
6.	ST Population: Persons	0.37	0.37	0.39
	Male	0.38	0.38	0.39
	Female	0.36	0.36	0.40

### 8. CLASSIFICATION OF WORKERS:

Sl. No. DETAILS

Total Cultivators	227049
Small &marginal farmers	221535
Agricultural laborers	259482
Artisans	NA
Workers in household industries	24476
Allied Agro Activities & Other works	144028
Total working Population	655935
<sup>0</sup> / <sub>0</sub> of working Population to Total Population	29.15%/0

9.

Size of Land holding	No. of holding	(%)	<u>Area (ha)</u>	(%)
(a) Less than 1 ha.	203840	78.9	67416	35.8
(b) Between 1 and 2 ha	30498	11.8	38531	20.5
(c) Between 2 and 4 ha	18454	7.1	49380	26.2
(d) Between 4 and 10 ha	5324	2.0	31511	16.7
(e) More than 10 ha	88	0.2	1296	00.8
TOTAL	258204		188134	

### 10. LAND UTILIZATION PATTERN:

(a) Geographical area	:	2, 33,729.15 ha.	
(b) Net cultivable area	:	1, 88,134.00 ha.	
(c) Permanent Fallow land	:	418.00 ha.	
(d) Cultivable Barren land	:	729.00 ha.	
(e) Land temporarily used for non-agriculture purpose	:	925.00 ha.	
(f) Pasture & others	:	288.00 ha.	
(g) Land not suitable for cultivation	:	7221.00 ha.	
(h) Aquatic land	:	4071.00 ha.	
(i) Land used for non-agriculture purpose	:	31943.00 ha.	
(j) Forest area	:	Nil	

### 11. IRRIGATION SOURCES:

Canal: -Sone Canal Circle, Ara.

Sone Canal Division, Bikramganj

State Tube well - 337 (63 functional)

Private Tube well - 18,901

E.R.P. Set - 09

Lift irrigation - 29

Net Irrigate Area.

Sl. No.	Source	Kharif Area (ha)	Rabi Area (ha)
1.	Canal	72952	29700
2.	Private Tube well	24478	36717
3.	Lift Irrigation	838	153
4.	State Tube well	454	526
5.	Other Sources	1685	1685
	Total	1,00,407(ha)	68,781 (ha)

### 2.AREA COVERED UNDER DIFFERENT CROPS

Kharif		Rabi		Summer (ha)	
Rice-	1,20,500	Wheat-	1,03,800	Green Gram-	20
Maize-	7,000	Maize-	2,295	Maize-	30
Pulses-	5,580	Pulse-	42,600	Vegetable-	400
Red Gram-	3,500	Gram-	20,500	Onion-	125
Black Gram-	1,000	Pea-	2,500		
Green Gram-	1,080	Others-	4,500		
Oil Seed-	525	Oil seed-	10,140		
Sesame-	215	Rabi/Mustard-	6,100		
Castor-	285	Sunflower-	40		
Sunflower-	25	Vegetable-	2,000		
Vegetable-	750	Potato-	3,525		
Total	1,34,355		1,64,360		575

### 13.<u>CREDIT SYSTEM:</u>

Lead Bank	Punjab National Bank
P.N.B.	22
S.B.I.	08
Allahabad Bank	01
C.B.I	01
Canara Bank	03
Bank of India	02
Union Bank	03

Indian Bank	02
United Bank	01
Bank of Baroda	02
Syndicate Bank	01
Madhya Bihar Gramin Bank	53
Central Co-operative Bank	15
Land Development Bank	05
Total	122

### 14.AGRIL. MACHINES:

Tractor	-	1623
Diesel Pump Set	-	15057
Harvester	-	05
Electric Pump Set	-	1870
Harrows	-	360
Winnower	-	25
Z T Machines		2434
Power Tiller		60
Sprayer & duster		676
Ripper		6
Rotavetor		25
Thrasher		425

### 15. AGRICULTURE SUPPORT / FACILITIES

- (a) Seed / Fertilizer / Pesticides depots: 103
- (b) Rural Markets / Mandis: 91
- (c) Rural God owns: 06
- (d) Cold Storage: 3 capacity 10000 MT.

#### 16. ANIMAL HUSBANDRY (AS PER 2005 CENSUS):

Dairy Animals	Total	Milking
Cow	157479	4279
Buffalo	206945	66068
Plough Animals	87852	
Sheep + Goat + Pigs	43698 + 134142 + 17097	
Poultry	215459	

### 17. PREDOMINANT ECONOMIC ACTIVITIES OF THE DISTRICT

Agriculture is the predominant economic activity in the district. Other important economic activities are dairy, horticulture, transport, housing, business and other activities in the service sector. The industrial activity in the district is in problem state. Most of the industrial units have become sick and good entrepreneurs and businessmen are shifting to other states.

#### 18. <u>MAJOR FOOD CROPS / COMMERCIAL AND PLANTATION / HORTICULTURE</u> <u>CROPS</u>

1. The major food crops of the district are paddy and wheat. Pulses, oilseeds and maize are also important crops

2. However, potato, onion and vegetable have emerged as major commercial horticultural crops .

- 3. Medicinal and aromatic plants have also started taking roots on a small scale, in the. district
- 4. Mushrooms cultivation is in a nascent stage.

#### 19. SPECIAL FEATURE OF THE DISTRICT:

- Bhojpur is considered as the rice-bowl in the state and Rice- Mill is a traditional industry
- Land is fertile and the farmers are comparatively progressive.
- Climate of the district is conducive for a wide ran agricultural / horticultural crops.
- Medicinal and aromatic plants are already being cultivated in the district.
- There are developed vegetable clusters.
- Dairy infrastructure is well developed.
- The level of farm mechanization is better than many other districts.
- Ara, the headquarter town of the district, is well connected both by rail and road.
- It is an adjoining district of the state capital.
- All the necessary inputs required for Farm as well as Non-Farm activities are available in the district or those can be easily obtained from the adjoining district at competitive price.
- The district is replete with potential for development in Primary, Secondary as well as in Tertiary sectors.

#### 20. OTHER FACTORS AFFECTING THE DISTRICT'S RURAL ECONOMY:

#### **POSITIVE FACTORS**

:

- District headquarter is well linked with other towns and cities by road and rail.
- There is a vast network of canals in the district.
- Two major rivers flow through the district providing a good source of river in fishery and an opportunity to do the sand business.
- A new power grid was commissioned during the year 2004-05 with which the power position in the district is improving.
- The district had been identified under the Rastriya Sam VikasYojana and some of the infrastructural bottlenecks, in terms of rural connectivity, energisationetc, had been bridged.

#### **NEGATIVES FACTORS**

- Bhojpur is a drought prone district.
- The rural connectivity and rural infrastructure is not very strong.
- A significant portion of land is rain fed.
- The condition of electric supply is not onneed based.

# THRUST AREAS

Priority Thrust Areas identified through PRA survey & other methods.

1.	Seed Production Programme with special focus on heat & drought
	tolerant cultivars.
2.	Resource Conservation Technology for better water management
	under changing climate
3.	Income generation through High tech Horticulture
4.	Adoption of INM and IPM for sustainable agriculture.
5.	Income generation for Farm Women through Apiculture, Poultry,
	Mushroom & Value addition
6.	Technological awareness for SHG and Kishan Club & Growers
	Association

## Action Plan- 2018-19

### 1. Name of the KVK: KVK ,SCADA, Bhojpur, Ara

2. Name of host Organization: Sone Command Area Development Agency,

Patna

3. Training Programme to be organized- (April 2018 to March 2019)

### ABSTRACT OF TRAINING PROGRAMMES TO BECONDUCTED

#### (April 2018 – March 2019)

## OFT-1.

01.	Title of On-Farm Trail		:	Evaluation of Chemical Control of Cyperus
				rotundas.
02.	Micro-irrigation system		:	Rainfed
03.	Problem identified		:	Cyperus weed is fastly infesting large area
				under upland conditions especially in
				Vegetables, Maize and Sugarcane
				including Paddy.
04.	Hypothesis		:	As post-emergence weedicide Glyphosate
				is controlling the weed but now the
				efficiency has drastic reduction. Thus
				there is need of Post emergence weedicide
				for the control of such Weeds
				A new broad spectrum Post emergence
				weedicide Halosulfuron methyl 75%WG
				will control effectively the Cyperus weed
				and may solve the problem.
05.	Source of technology		:	HAU, Haryana
06.	Technical intervention		:	Weedicides
07.	Treatment details	Tech. option -1	:	Farmers practice (Hand weeding)
		Tech. option -2	:	Glyphosate@3.0 Lt/ ha as postemergence
		Tech. option -3	:	Halosulfuron methyl 75%WG @90 gram
				a.i./ ha as post emergence
08.	Replication		:	20(Area 0.2 ha./treatments)
09.	Performance indicators	Technical	:	Weed Count / m2, dry wt.,
		observation		Yield attributes, yield
		Economic	:	Net return B. C. Ratio
		indicators		
		Farmers feedback	:	Quality & Effectiveness of the chemical
				return

## **OFT -2**

01.	Title of On-Farm Trail		:	Chemical control of parasitic weeds of
				lentil
02.	Micro-irrigation system		:	Rainfed
03.	Problem identified		:	Cuscuta as parasite weed is fastly
				infesting large area under pulses specially
				lentil. This weed is also hazardous for
				animal and other associated crops.
04.	Hypothesis		:	As pre-emergence weedicide
				Pendimethalin is controlling the weed
				emergence in early stage but again it is
				appearing. Thus there is need of Post
				emergence weedicide for the control of
				such parasites
				A new broad spectrum Post emergence
				weedicide Quizalfop ethyl is identified for
				effective control of Cuscuta and may
0.7				solve the problem.
05.	Source of technology		:	DrRPCAU, Pusa
06.	Technical intervention		:	Weedicides
07.	Treatment details	Tech. option -1	:	Farmers practice (Hand removal)
		Tech. option -2	:	Pendimethalin - @1.0 kg a.i. / ha as
			:	pre-emergence
		Tech. option -3		Quizalfop Ethyl 5EC @40 g a.i./ ha as
				post- emergence
08.	Replication		:	20(Area 0.2 ha./treatments)
09.	Performance indicators	Technical	:	Weed Count / m2, dry wt.,
		observation		Yield attributes, Yield
		Economic	:	Net return B. C. Ratio
		indicators		
		Farmers feedback	:	Quality & Effectiveness of the chemical
				return

## OFT-3.

01.	Title of On-Farm Trail		:	Evaluation of suitable date of Wheat
				sowing in Rice-Wheat cropping system
02.	Micro-irrigation system		:	Irrigated
03.	Problem identified		:	Traditionally long duration Paddy is
				grown in major parts of canal irrigated
				situation. This results in delay up to 40
				days in Wheat sowing. This leads to
				drastic reduction in Wheat productivity
				with all based management practices.
04.	Hypothesis		:	Timely sowing that is in 1 <sup>st</sup> weak of Nov.
				Provides more cold days for better
				vegetative growth of Wheat which may
				result in better productivity
05.	Source of technology		:	CSISA
06.	Technical intervention		:	Date of sowing & Seed
07.	Treatment details	Tech. Option -1	:	Farmers Practice i.e. delayed cultivation
				(20-30 November)
		Tech. Option -2		Sowing of Wheat on 1 <sup>st</sup> Nov.
		Tech. Option-3		Sowing of Wheat on 7 <sup>th</sup> Nov.
		Tech. Option -4		Sowing of Wheat on 15 <sup>th</sup> Nov.
08.	Replication		:	30 (0.2ha/treatment)
09.	Performance indicators	Technical	:	Tillering increase/decrease. Yield & Test
		observation		weight
		Economic	:	Net return BC ratio
		indicators		
		Farmers feedback	:	Over all crop Growth & Grain Quality

01.	Title of On-Farm Trail		:	Assessment of high yielding variety of
				Maize
02.	Micro-irrigation system		:	Irrigated Upland
03.	Problem identified		:	Poor yield of Maize due to selection of
				local variety
04.	Hypothesis		:	Farmers are growing local variety of
				maize which gives poor yield in district
				Bhojpur having Avg. yield 24 Qt. /ha.
				Improved variety like NK-6240 and BKC-
				7074 are high yielding variety may be
				suitable to this area. Therefore to evaluate
				the comparative performance present OFT
				is proposed.
05.	Source of technology		:	DMR,Begusaray
06.	Technical intervention		:	High yielding Hybrid Maize seed
07.	Treatment details	Tech. Option -1	:	Farmers practice local cultivars cultivation
		Tech. Option -2	:	Cultivation of DHM-117
		Tech. Option - 3	:	Cultivation of HM-12
08.	Replication		:	10 ( 0.20 ha/treatment )
09.	Performance indicators	Technical	:	Plant Height, Days to Mature, Avg. No. of
		observation		Cobs/Plant, No. of Grain/Cob
				Increase/decrease in yield, test weight
		Economic	:	Net return BC ratio
		indicators		
		Farmers feedback	:	Crop growth & yield.

01.	Title of On-Farm Trail		:	Evaluation of Maize-Potato inter cropping
02.	Micro-irrigation system		:	Irrigated Upland
03.	Problem identified		:	At times the Potato crop is facing severe
				disease and natural challenges resulting in
				very poor economic returns. Under such
				changing situation Maize is the future crop
				which can change the economics
04.	Hypothesis		:	Newly developed Hybrid verity DKC-
				9081 may be a good choice for
				intercropping with Potato and it may be
				replace the traditional cultivation of sole
				potato crop.
05.	Source of technology		:	RAU, PUSA
06.	Technical intervention		:	High yielding Hybrid Maize seed
07.	Treatment details	Tech. Option -1	:	Farmers practice(i.e.cultivation of Potato)
		Tech .Option -2	:	Cultivation of Potato + Maize
08.	Replication		:	10 (0.20 ha. / farmers)
09.	Performance indicators	Technical	:	Plant Height, Days to Mature, Avg. No. of
		observation		Cobs/Plant, Increase/decrease in yield, No.
				of Grain/Cob, Test weight. Yield
				Equivalence
		Economic	:	Net return BC ratio
		indicators		
		Farmers feedback	:	Crop growth & yield.

01.	Title of On-Farm Trail		:	Evaluation of HYV of round Brinjal Variety
				NON-0137 to replace the local cultivars
02.	Micro-irrigation system		:	Irrigated
03.	Problem identified		:	Brinjal is the second most important vegetable of Bhojpur district in term of area. Through the farmer are cultivating Round Brinjal's local cultivarssince long. The Germplasmhaddeteriorated and number of pest and disease are attacking the cultivars resulting in poor yield i.e. below 120 qt/ha and very poor economical return.
04.	Hypothesis		:	As per the felt need of the farmers the traditional varieties need to replace with High yielding as well as YMV resistant varieties considering the importance of this crop the present OFT with variety Non – 0137(Round Brinjal) is prospered to assess its potentiality against the specific problem of poor yield
05.	Source of technology		:	IIVR, Varanasi
06.	Technical intervention		:	Improved Seed
07.	Treatment details	Tech. option -1	:	Farmers Practice
		Tech.option-2		Cultivation of Non – 0137
08.	Replication		:	10 Farmers (0.2 ha./ treatment) 2 ha.
09.	Performance indicators	Technical	:	Vigor &Color.
		observation		Etiology
				Yield
		Economic	:	Net result & BC ratio
		indicators		
		Farmers feedback	:	Overall crop growth & gain quality

## **OFT-7.**

01.	Title of On-Farm Trail		:	Evaluation of Chemical Wilt control in
- 02				Bottle Gourd
02.	Micro-irrigation system		:	Irrigated Upland
03.	Problem identified		:	Bottle gourd is one of the leading crop and
				is grown in an area of 1200 ha. Having the
				Average productivity of 300 Qt/ha. (net
				return Rs. 1.4 Lakh/ha.) but since last 3-4
				years there is drastic reduction in yield up
				to 40% was observed due to wilt
				infestation This has severely affected the
				economic return of this highly value crop
04.	Hypothesis		:	The traditional molecule foliar application
				is partially controlling the disease. A new
				broad spectrum fungicide having the
				combination of Pyrochlostrabin
				5%+Metiram 55% as good curative for this disease. This molecule was evaluated
				in KVK & was found significantly good for the control of Wilt.
05.	Source of technology			K.V.K., Bhojpur
05.	Technical intervention		:	Fungicide
07.	Treatment details	Tech. Option -1	:	Farmers practice two spray of
07.	Treatment details	reen. option -1	•	Mancozeb+Carbendazim @2 Kg./ha.
		Tech. Option -2		Two spray Pyrochlostrabin 5%+Metiram
				55% @ 1 Kg./ha.
08.	Replication		:	10 (0.20 ha. Per farmers)
09.	Performance indicators	Technical	:	No. Of infected plant per100mt
		observation		L L
		Economic	:	Net return B. C. Ration
		indicators		
		Farmers feedback	:	Disease infestation fruit quality
				economical return

## **OFT-8.**

01.	Title of On-Farm Trail		:	Evaluation of Molecules for effective
				Sheath Rot Control in Maize
02.	Micro-irrigation system		:	Irrigated Upland
03.	Problem identified		:	Maize crop in general is suffering a lot due
				to Sheath Rot infection now a day. This
				disease is appearing in epidemic from in
				the initial stage of flowering & thus result
				in heavy lass in Maize production
04.	Hypothesis		:	Since the disease is composite in nature,
				application of Anti biotic may me curative.
				To assess the effectiveness the present
				OFT is being proposed.
05.	Source of technology		:	KVK, Bhojpur
06.	Technical intervention		:	Anti biotic with Fungicide and other
				chemicals
07.	Treatment details	Tech. option -1	:	Farmers practice spraying of Hexaconazole
			:	5 EC @ 1.25 lit / ha.
		Tech. option -2	:	Soil treatment with Bleaching Powder
				(3Kg /ha)
		Tech. option -3		Two spray of Streptocyclin + Copper
				OxiChloride(25gm+750 gm /ha) after 30 DAS
				and 60 DAS
08.	Replication		:	20 (0.20 ha/treatment.)
09.	Performance indicators	Technical	:	Occurrence of Sheath Blight
		observation		Increase in yield Paddy yield
		Economic	:	Net return BC ratio
		indicators		
		Farmers feedback	:	Plant health & efficiency of medicine

## **OFT-9.**

01.	Title of On-Farm Trail		:	Management of Rust disease in Lentil
02.	Micro-irrigation system		:	Rain fed Medium land
03.	Problem identified		:	Lentil crop in general is suffering a lot due
				to Sheath Rot infection now a day. This
				disease is appearing in epidemic from in
				the later stage of flowering & thus result in
				heavy loss in Lentil production
04.	Hypothesis		:	The incidence of Rust disease in Lentil at
				flowering results in heavy loss in yield
				resulting in poor seed setting. The spread
				of disease is very fast through smutted
				spores. The application of fungicides at
				different stages may control the incidence
				of disease and combat further spread
05.	Source of technology		:	RAU, Pusa
06.	Technical intervention		:	Fungicide
07.	Treatment details	Tech. option -1	:	Farmers practices Seed treatment with
			:	Carbendazim (2g /kg seed)
		Tech. option -2	:	Seed treatment with Carbendazim (2g /kg
				seed)+Two spray of Carbendazim+ Mancozeb
				(2.0 kg a.i. /ha) after 30 DAS and 60 DAS
08.	Replication		:	20 (0.20 ha/treatment.)
09.	Performance indicators	Technical	:	Occurrence of Rust disease
		observation		Increase in yield Lentilyield
		Economic	:	Net return BC ratio
		indicators		
		Farmers feedback	:	Plant health & efficiency of medicine

01.	Title of On-Farm Trail		:	Evaluation of N application in Lentil
02.	Micro-irrigation system		:	Irrigated
03.	Problem identified		:	Farmers are not using the Rhizobium Culture and the FYM due to in proper supply. This result in poor Nitrogen availability in the Rhizosphere of Lentil leading to poor vegetative growth and branching and as a result low yield of Lentil
04.	Hypothesis		:	Application of Nitrogen in addition to the normal recommendation of DAP which is supplementing partial Nitrogen will cover up the demand of Lentil crop for proper vegetative growth, which is now going to be a bigger problem in Lentil growing area. The proper branching & vegetative growth will result in increased no. of flower per plant leading to more grain setting and ultimately better yield
05.	Source of technology		:	ICAR, IIPR, Kanpur
06.	Technical intervention		:	Application of N Fertilizer
07.	Treatment details	Tech. option -1 Tech.option-2 Tech.option-3	:	Farmers Practice application of DAP@125 kg./ha. DAP @125Kg/ha + 30 Kg Urea/ha as basal DAP @125Kg/ha + 10 gram Urea/liter as foliar 30-35 days after DAS
08.	Replication		:	20 Farmers (0.2 ha./ treatment) 8 ha.
09.	Performance indicators	Technical observation Economic	:	No. of plant / sq. meter plant height No. of grain per pot yield Test weight Net result & BC ratio
		indicators		
		Farmers feedback	:	Overall crop growth & gain quality

## **OFT-11.**

01.	Title of On-Farm Trail		:	Evaluation of Pre-sowing irrigation on Germination and Yield of Lentil
02.	Micro-irrigation system		:	Irrigated
03.	Problem identified		:	The frequent tillage operations over long periods have detrimental effect on surface of soil. It pulverizes the soil into dust and breaks down soil aggregates. Tillage hastens the oxidation of organic matter
				from the soil, reduces infiltration and induces runoff and soil erosion.
04.	Hypothesis		:	The area under Lentil is around 20000 ha. with average yield of around 8 quintal / ha. it since to be very low as compare to the potential yield of the existing cultivars which is more than 10 Q. / ha The pre sowing irrigation may result is better crop stand with good vegetative smooth and high nutrient use efficiency leading to improvement in yield.
05.	Source of technology		:	B.A.U., Sabour
06.	Technical intervention		:	Irrigation
07.	Treatment details	Tech. option -1 Tech.option-2	:	Farmers Practice is no Pre sowing irrigation Pre sowing irrigation
08.	Replication		:	20 Farmers (0.2 ha./ treatment) 4 ha.
09.	Performance indicators	Technical observation	:	No. of plant / sq. meter plant height No. of sowing per pot yield Test weight (1000 grin weight)
		Economic indicators	:	Net result BC ratio
		Farmers feedback	:	Overall crop growth & gain quality

01.	Title of On-Farm Trail		:	Evaluation of Conservation Tillage
				Practices in cultivation of Lentil
02.	Micro-irrigation system		:	Rain fed
03.	Problem identified		:	Traditionally Lentil is shown in major part after harvesting of Paddy on residue moisture. This result in poor germination and crop stand leading to poor yield of Lentil with all Agronomical practices.
04.	Hypothesis		:	The area under Lentil is around 20000 ha. With average yield of around 8 quintal /ha, very low as compare to the potential yield of the existingcultivars (16 Q. / ha). This is mainly due to poor moisture leading to under supply of nutrients. To control above disadvantages of repeated tillage operations in cultivation of lentil, Sowing of seeds by drilling might be better optionsfor resource conservation
05.	Source of technology		:	CSISA, Bihar &UP Hub
06.	Technical intervention		:	Irrigation
07.	Treatment details	Tech.option-1 Tech.option-2	:	Farmers Practice conventional of Sowing Sowing of Lentilwith ZT drilling
08.	Replication		:	20 Farmers (0.2 ha./ treatment) 4 ha.
09.	Performance indicators	Technical	:	No. of plant / sq. meter plant height
		observation		Test weight (1000 gram weight), Yield
		Economic	:	
		indicators		
		Farmers feedback	:	Overall crop growth & gain quality

01.	Title of On-Farm Trail		:	Evaluation of Conservation Tillage
				Practices in cultivation of Gram
02.	Micro-irrigation system		:	Rain fed
03.	Problem identified		:	Traditionally Gram is shown in major part
				after harvesting of Paddy on residue
				moisture. This result in poor germination
				and crop stand leading to poor yield of
				Gram input of all agronomical practices.
04.	Hypothesis		:	The area under Gram is around 18000 ha. with
				average yield of around 8-9 quintal/ ha,very
				low as compare to the potential yield of the existing cultivars (16-18Q./ ha). This is mainly
				due to poor moisture leading to under supply
				of nutrients. To control above disadvantages
				of repeated tillage operations in cultivation
				of lentil, Sowing of seeds by drilling might
				be better options for resource conservation
