Preface

NICRA adopted village Hnahthial, is located in the southern part of Mizoram under Lunglei District. The geographical area covers about 12 Sq.km. It lies between 22°57'51N to 22°60'31N latitude and 92°55'42E to 92°58'32E longitude. The altitude ranges from 600msl to 850ms. As per 2011 census, 7041 numbers of population are settled in the village. Climate change has become an important area of concern in the village as more than 80% of the total population are engaged in agriculture and its allied sector. All farming activities are completely dependent on Monsoon rain. The village is highly vulnerable to water stress and storm. Due to unseasonal rainfall and steepness of topography, underground water retention is minimal, causing perennial water sources to dry up during pre monsoon and post monsoon period.

Farmers are the backbone for the survival of society because they provide food and fiber that nourishes and clothe us. They make use of natural resources and utilize both primitive and advanced technologies to accomplish their goal. Farmers have to face a host of challenges, the most difficult of which is dealing with uncertainties of nature like, unseasonal rain, increase temperature etc.

The negative impact of climate change in agriculture and its allied sectors resulted in problems related to production and productivity and also threaten the livelihood activities of the farmers. Keeping in view ICAR has launched a project called 'National Innovation On Climate Resilient Agriculture (NICRA)' in February 2010. Under this project, KVK Lunglei District selected Hnahthial as adopted village. Intervention was made through Technology Demonstration Component. It consists of four modules :-

1. Natural Resource Management
2. Crop Production
3. Livestock and Fisheries
4. Institutional Intervention

Besides these four modules Capacity building/ Human Resource Development and Extension activities form an integral part of the project which is the one of the reason for successful implementation of the project.

The farmers profile will help in formulating different intervention program which will be a connecting platform for farmers to each other not only in the village but also its satellite villages. This will help in updating their technological knowledge for increasing production and productivity as well as sustainable agriculture under a harsh climatic condition.
